The following action is in response to the proposed amendment-after-final received February 17, 2009. The proposed amendment has been approved for entry. Claims 31-33, 35, 37-53 and 55-59 are pending.

In reviewing the claims another deficiency has been noted, necessitating the following examiner's amendment:

***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

**In lines 32-33 of claim 31, "distributed on at least one of the circumference" has been deleted.**

The above change has been made to eliminate indefinite and unnecessary language from claim 31.

***Allowable Subject Matter***

Claims 31-33, 35, 37-53 and 55-59 are allowed. Claims 31-33, 37-53, 56, 35, 55 and 57-59 will be renumbered for printing as claims 1-26, respectively.

***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to anticipate or render obvious an assembly as defined in claim 31, particularly wherein the axial openings in the inner discs of the second friction shifting element or the recesses in the inner disc carrier forms a penetration area through which axially aligned fingers are guided, the axially aligned fingers are associated with the first servo device of the first shifting element; and, the axially aligned fingers are provided to activate the first friction shifting element and penetrate the axial openings in the inner discs of the second friction shifting element.

The art of record also fails to show or render obvious an assembly as defined in claim 39, particularly wherein both of the first and second servo devices have several fingers distributed about a circumference of a respective piston, and the several fingers penetrate in a radial direction one of the radial openings provided in the common annular surface between both the first and second disc packets and the free ends of the several fingers facilitate engagement of the associated first and second disc packet, the first friction shifting element is engaged by a pulling activation of the several fingers of the piston of the first servo device toward the pot base of the inner disc carrier; and, the second friction shifting element is engaged by a pressing activation of the several

Art Unit: 3655

fingers of the piston of the second servo device away from the pot base of the inner disc carrier.

The prior art also fails to disclose or render obvious an assembly as defined in claim 56, particularly wherein the common inner disc carrier for both the first and second disc packets has radial openings distributed on a circumference thereof in an axial area between both the first and second disc packets; and, the radial openings in the inner disc carrier which receives fingers supported by at least one respective piston of the first and second servo devices are longer in the axial direction than an axial extent of the fingers plus a gap of the first and the second disc packets of the associated first and second friction shifting elements.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Response to Amendment***

In response to the amendment received February 17, 2009, the rejection of claims 35, 37-53 and 55-59 under 35 USC 112, 2<sup>nd</sup> paragraph, is withdrawn.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rodney H. Bonck whose telephone number is (571)
